

Completions Software: An Overview

How completions software helps to manage complex projects

Johnie Boutwell, Manager of LNG Services, Rev1 Energy | September 04, 2024

What is completions software?

Completions software is a type of software that helps to track, verify, and document the completion of various tasks and activities in a project. It is especially useful for projects that involve multiple disciplines, contractors, and stakeholders, such as building plants, factories, or infrastructure.

Completions software allows project managers to define the scope, schedule, and quality requirements of each task, and assign them to different teams or individuals. It also provides a platform for communication, collaboration, and reporting among the project participants. Completions software enables project managers to monitor the progress, status, and issues of each task, and ensure that they are completed according to the specifications and standards.

How is completion software used in projects like building LNG plants?

Projects like building plants are complex and require a high level of coordination and integration among various disciplines, such as engineering, construction, commissioning, and operations. Completions software helps to streamline and simplify the management of these projects by providing a comprehensive and centralized system for tracking and verifying the completion of each task and activity.

Some of the benefits of using completions software in projects like building plants are:

- It improves the efficiency and quality of the project delivery by reducing errors, delays, and rework.
- It enhances the visibility and transparency of the project status and performance by providing real-time data and reports. It facilitates the collaboration and communication among the project participants by enabling information sharing and feedback.
- It supports the compliance and auditability of the project by generating documentation and evidence of the completion of each task and activity.
- It reduces the risks and costs of the project by identifying and resolving issues and problems early.
- Completions software is a valuable tool for managing complex projects like building plants. It helps to ensure that the project is delivered on time, on budget, and on quality, and that the plant is ready for safe and reliable operation.

We at Rev1 Energy have our own CMS called **Tracker Technologies**. Our TrackerCheck software was designed with input from our commissioning experts, featuring functionality developed to help your projects run smoother. Start your **free trial** today. That's right, **free trial**!

If you need any assistance or guidance in your plant commissioning project, contact us at Rev1 Energy, your Commissioning Experts. We have the experience, expertise, and resources to help you achieve your commissioning goals.
